Rider Measurements

Height: _____ (with riding shoes)

Weight: _____

Inseam: _____ (with rider shoes)

Shoe Size: _____

CURRENT RIDE

Tell us a little about your current ride. For these measurements, you should use the bike that you ride the most or one that is most similar to the one you are having built. This is for reference only.

This bike is a:

Mountain

Road

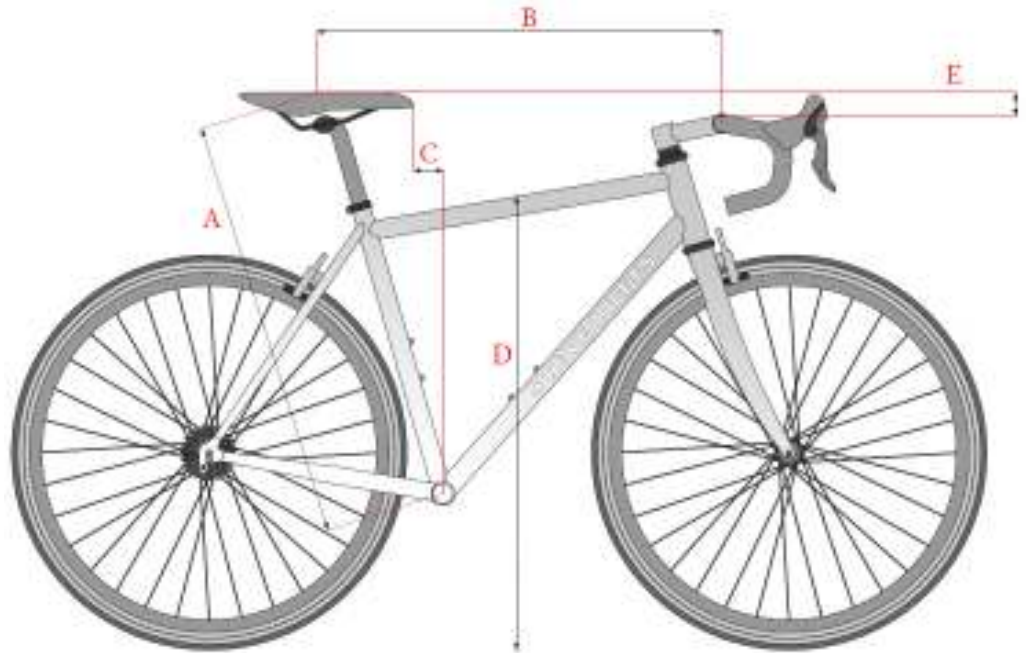

A. Saddle Height

B. Rider Length

C. Saddle Setback

D. Stand-Over Height

E. Handlebar Drop

Please comment on what you like and dislike about the rider position on your current bike. Would you describe the rider position as: too high, too low, too stretched out or just right? Is the bar too high or too low? If you are using drop bars, do you spend most of your time on the drops, the hoods or the top when you are climbing, descending and on the flats? What hurts the most after a long ride: hands, wrist, shoulder, neck, bottom, feet or other?
